Veille technologique La blockchain en 2022 1/12

Qu'est-ce que la blockchain?

La **blockchain**: c'est une technologie de stockage et de transmission d'informations, prenant la forme d'une base de données. qui a la particularité d'être partagée simultanément avec tous ses utilisateurs et qui ne dépend d'aucun organe central, a pour avantage d'être rapide et sécurisée.

Innovations de la Blockchain:

La blockchain étant encore une technologie émergente, les évolutions de celle-ci sont très rapides, au point qu'il est difficile de toutes les suivres.

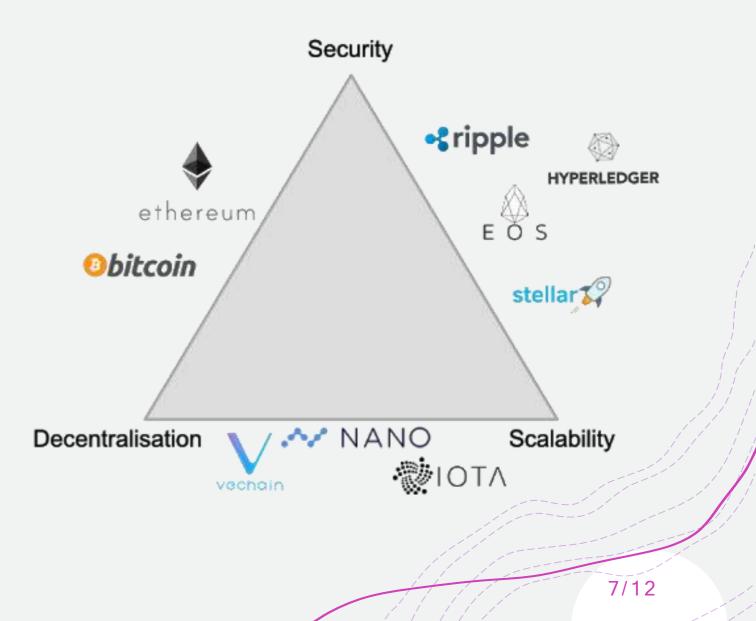

Différents consensus de sécurisation de la blockchain

Proof of work (Bitcoin, Ethereum) Proof of stake (Cardano, Avalanche, Ethereum2.0)

Proof of history/stake (Solana)

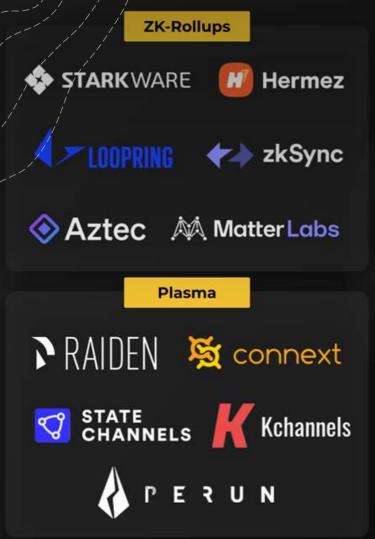

Delegated proof of stake (EOS)

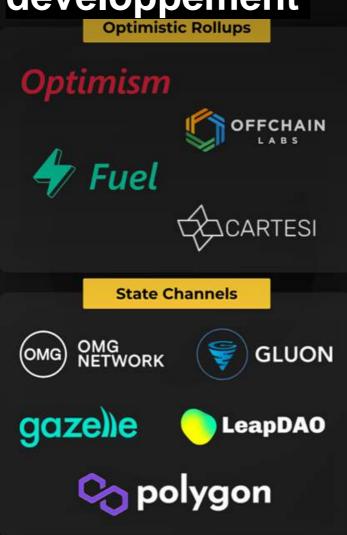

Le trilemme de la blockchain

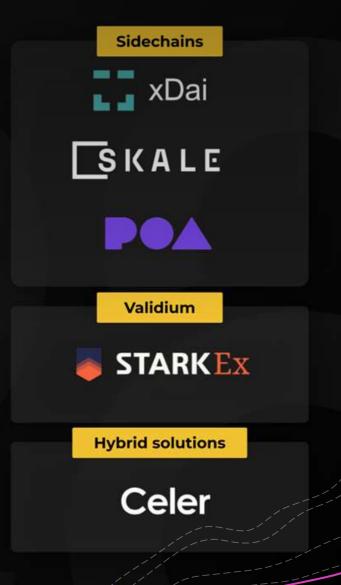

Ethereum : Ecosystem le plus performant dans son

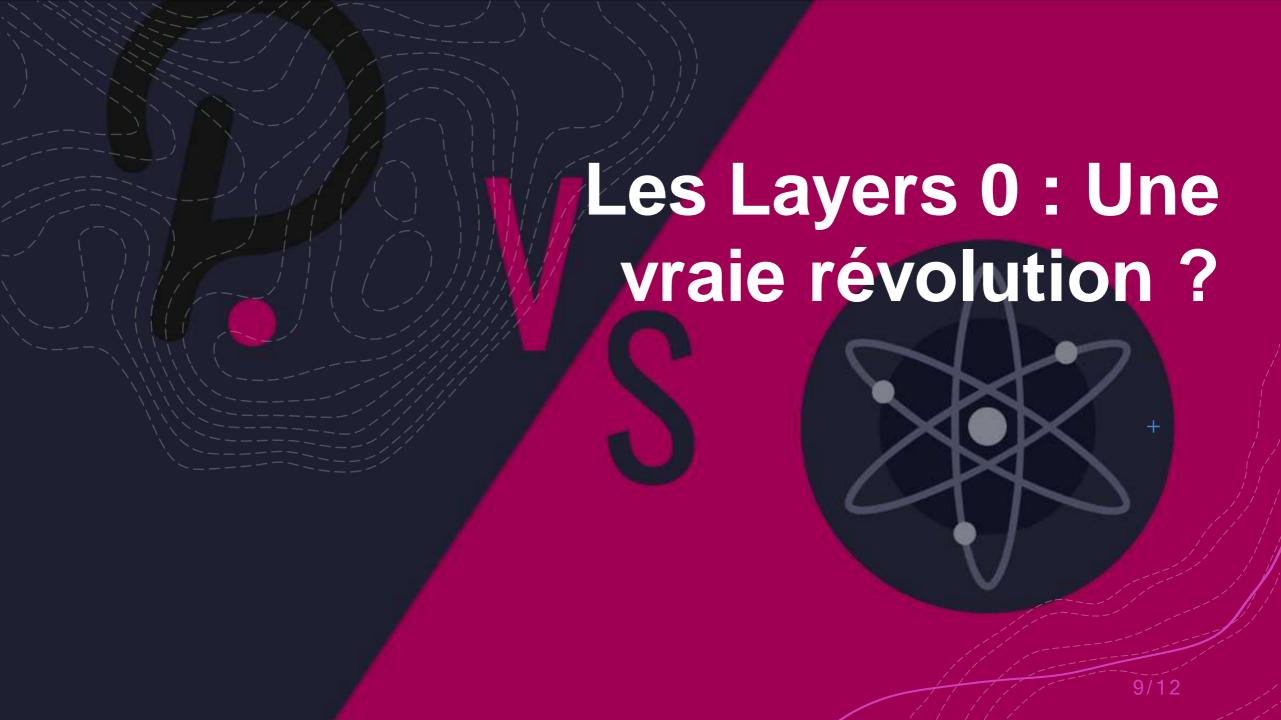

développement

Différentes modélisations

Cosmos

Cosmos is a scalable and interoperable network of blockchains. Developers can launch their own blockchains (or 'Zones') using the Cosmos SDK.

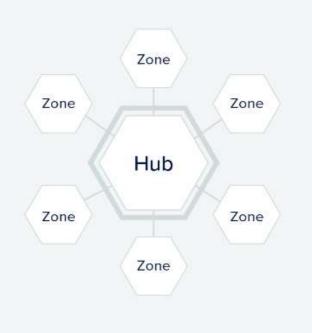

Cosmos **Zones** are connected together by Hubs using the Inter-Blockchain Communication protocol (IBC).

Polkadot

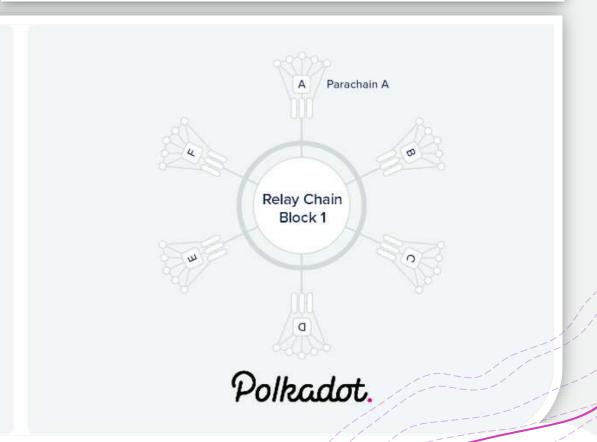

Polkadot is a blockchain protocol that unites an entire network of purpose-built blockchains known as 'parachains'.

Parachains are connected together and secured by

the Polkadot Relay Chain. They can also connect with external networks via bridges.
